### Product Details:

## PU Plastic Chain for Cone Dealers in Bangalore

The PU Chain Cone Chain Connector Kit works with traffic cones of any size to create an effective visual barrier. Great for pedestrian traffic zones, parking lots, constructions sites, warehouses, and more, these lightweight and portable cone connectors are a cost-effective tool for isolating specific areas. Simply slide the cone connectors over the top of the safety cone (not included) and attach the brightly-colored plastic chain. The distinctive visual barrier allows you to block off a larger area with less cones by spacing them farther apart. If a car drives through the traffic cone chain, the chain will simply fall off of the connector and no damage will be done to the car. The PU Chain Connector Kit is made of durable, high-density polyethylene with UV inhibitors to protect it from fading in the sun and can be used indoors or outdoors.

The PU Chain Traffic Cone and Chain Kit includes everything you need to create an effective visual barrier to prevent unwanted traffic from entering specific areas. The traffic cones are made of durable injection-molded PVC with a 14 x 14-inch base. The cone chain connectors and chains are constructed from high-density polyethylene with UV inhibitors to protect them from fading in the sun and can be used indoors or outdoors.

- Creates an effective visual barrier in pedestrian traffic zones and work zones
- PU Chain Cone Chain Connectors work with traffic cones of any size (sold separately)
- Kits available that include traffic cones, PU Chain Cone Chain Connectors and chain
- Complies with OSHA standards for visual barriers when used with traffic cones
